

ABSTRACT

A safety device for a fall restraint includes an anchoring member (1) to which the fall restraint can be coupled directly or indirectly, and a fastening element for a firm and durable connection to an object (13). The fastening element are formed by a flexible fastening flap (11) which is intended and adapted to bring about the firm and durable connection to the object. Extending from the fastening flap (11) is a fastening net (12) via which the anchoring member (1) is connected to the flexible fastening flap (11).
